Compost accelerator

Natural & organic

**ACTING
FOR...**

Thomzoo©

Implantation of a non-pathogenic aerobe-specific bacterial flora (class 1 European Federation of Biotechnology) for breaking down a large variety of organic matter materials.

Maintains a perfect balance for aerobic biodegradation.

pH buffer capacity for food residues, such as:

- Vegetables, fruit and starch
- Cooked pasta and rice
- Egg residues and shells, tea, coffee, starch, cellulose, proteins, fats

Reduces odours

Easy to use – for healthy, grateful gardens.

Biotechnological technique (living organisms)
Explanations & instructions on page 2

INFORMATION ON THE COMPOSTING PROCESS

To make it short: under the influence of heat, humidity and oxygen microorganisms transform kitchen- and garden waste into an excellent natural fertilizer for your garden. This soil, which is rich in nutrients, feeds plants and enriches the soil.

The O'bio treatment accelerates the composting process, while reducing bad smells and preventing the attraction of insects (flies, mosquitoes).

O'bio substantially improves the compost quality and therefore also improves its use for plants and vegetable gardens.

Recommendation for use:

Biotechnology does not produce instant results; it requires time for the microorganisms to become effective.

Treatment:

Spray with small amount of solution each time you add a substantial quantity of organic waste.

Storage:

Store in a dry and frost-free place, shelf-life 12 months.

Precaution:

Keep out of children's reach.

COMPOSITION

- Enzymes
- Biosurfactants
- Nutrients and mineral salts from agricultural sources
- Bacteria type subtilis class1 (EUROPEAN FEDERATION OF BIOTECHNOLOGY)
